

CoderCrest

Create a React + TypeScript component named HeroSection in src/components/HeroSection.tsx using Tailwind CSS and the hls.js npm package (install it: npm install hls.js).

Layout & Background:

A `<section>` that is 100vh tall, position: relative, overflow: hidden, flex column centered, with background: #000.

A fullscreen HLS video background using this Mux stream URL:

<https://stream.mux.com/tLkHO1qZoaaQOUeVWo8hEBeGQfySP02EPS02BmnNFyXys.m3u8>

The video is `<video autoPlay loop muted playsInline>` with classes absolute inset-0 w-full h-full object-cover and zIndex: 0. Play it through hls.js: if `Hls.isSupported()`, create an `Hls({ autoStartLoad: true })` instance, `loadSource`, `attachMedia`, and play on `MANIFEST_PARSED`. Else, fall back to native `application/vnd.apple.mpegurl` support. Clean up the `Hls` instance on unmount. No overlay over the video — full opacity.

Content container:

A div with classes relative z-10 flex flex-col items-center text-center px-4 max-w-5xl mx-auto and inline style `marginTop: 380` (pushes content down 380px).

Headline (`<h1>`):

Font: 'YDYoonche L', 'YDYoonche M', sans-serif

fontSize: clamp(2.2rem, 7vw, 6.5rem), color: #fff, fontWeight: 300, letterSpacing: -0.01em, lineHeight: 1.1, className="leading-tight".

Three lines:

"The vision" — gradient text using background: linear-gradient(90deg, #666666 0%, #d0d0d0 50%, #666666 100%) with WebkitBackgroundClip: text, WebkitTextFillColor: transparent, backgroundClip: text, display: block, lineHeight: 1.1, marginBottom: -0.22em.

"of engineering" — same gradient styling as line 1.

A flex line flex items-center justify-center gap-3 flex-wrap with white text containing in order:

`<span style={{color:'#999'}}>is</span>`

A circular video icon (see below) playing the human clip

`<span>human</span>`

`<span style={{color:'#999', position:'relative', top:'0.15em', marginLeft:'0.25em'}}>+</span>`

A circular video icon playing the AI clip

`<span>AI</span>`

VideoIcon component:

Outer `<span>` with classes `inline-block align-middle rounded-full overflow-hidden`, sized via `inline style width/height: clamp(48px, 10vw, ${size}px)` (default `size=72`, but the hero passes `size={110}` for both icons), `flexShrink: 0`.

Inner `<video autoPlay loop muted playsInline>` with `width: 100%`, `height: 100%`, `objectFit: cover`, `display: block`. Call `videoRef.current.play().catch(() => {})` in a `useEffect`.

Two CloudFront MP4 sources:

Subheading (`<p>`):

Classes `mt-4 max-w-xl text-center px-2`.

`fontSize: clamp(0.95rem, 2.2vw, 1.2rem)`, `color: #ccc`, `lineHeight: 1.4`, `fontWeight: 400`.

Text: "We help you map the talent you need, track the talent you have, and close your gaps to thrive in a GenAI world."

CTA Button:

Classes: mt-6 transition-all duration-300 hover:scale-[1.03] hover:shadow-[0px_6px_32px_8px_rgba(39,243,169,0.22)] active:scale-[0.98]

Inline style: padding: '12px 28px', background: '#000', boxShadow: '0px 6px 24px 6px rgba(39, 243, 169, 0.15)', borderRadius: 8, outline: '1px solid #30463C', outlineOffset: -1, border: 'none', cursor: 'pointer', display: 'inline-flex', alignItems: 'center', justifyContent: 'center', gap: 10.

Inner with color: '#fff', fontSize: 14, fontWeight: 400, text: "Join The Movement!".

Animations / interactions:

All three videos auto-play, loop, muted, inline.

Button has a 300ms transition: scales to 1.03 and gains a brighter green glow on hover, scales to 0.98 on active.

Fonts:

The headline expects 'YDYoonche L' / 'YDYoonche M' to be loaded globally (e.g., via index.css or an external font provider). It falls back to sans-serif.
