

Glassmorphism Agency Hero

Build a production-ready, responsive landing page using React, Tailwind CSS v4, and Vite. The design should feature a high-end, dark-mode "glassmorphism" aesthetic with specific purple/pink gradients.

1. Tech Stack & Libraries:

Use hls.js for video streaming.

Use motion/react (formerly Framer Motion) for animations.

Use react-use-measure for sizing logic.

Use clsx and tailwind-merge for class management.

Use lucide-react for standard icons (if needed), but I will provide custom SVG paths for specific UI elements.

2. Global Styling:

Background: Dark/Black (#010101).

Primary Gradient: A diagonal gradient used for accents: from-[#FA93FA] via-[#C967E8] to-[#983AD6].

Typography: Modern sans-serif, center-aligned hero text.

3. Hero Section Components:

Announcement Pill:

A pill-shaped top badge.

Background: Semi-transparent dark (bg-[rgba(28,27,36,0.15)]) with a subtle border.

Icon: A "Zap" icon inside a gradient-filled box with a glow effect.

Text: "Used by founders. Loved by devs." in light grey.

Main Headline (H1):

Large text (responsive sizing: 48px mobile to 80px desktop).

Text: "Your Vision" on line 1, "Our Digital Reality." on line 2.

Style: Text should have a gradient fill (White to Purple/Pink).

Subheadline:

Text: "We turn bold ideas into modern designs that don't just look amazing, they grow your business fast."

Color: text-white/80.

CTA Button:

"Book a 15-min call" text.

Rounded full button with a white background and black text.

Includes a circle icon with an arrow inside, styled with the primary purple gradient.

Outer border wrapper with a glass effect.

4. Hero Video Integration (Critical Details):

Source: HLS Stream URL: <https://customer-cbeadsgr09pnsezs.cloudflarestream.com/697945ca6b876878dba3b23fbd2f1561/manifest/video.m3u8>

Fallback: If HLS fails, fallback to this MP4:

[/_videos/v1/f0c78f536d5f21a047fb7792723a36f9d647daa1](#)

Implementation: Do NOT use react-player. Use a native <video> tag with a custom useEffect hook implementation of hls.js.

Styling:

Blend Mode: Use mix-blend-screen so the video black background blends into the page.

Positioning: The video should be at the bottom of the hero. Apply a negative top margin (-mt-[150px]) so it overlaps behind the text.

Z-Index: Ensure the text content is z-20 (above) and video is z-10 (below).

Layout: The video must be 100% width (w-full), auto height, and stretch edge-to-edge without being cropped (do not use object-contain or fixed heights).

Overlay: Add a gradient fade (from-[#010101] via-transparent to-[#010101]) over the video container.

5. Logo Cloud Section (Animated):

Place this section immediately below the video.

Background: Semi-transparent glass (bg-black/20 backdrop-blur-sm) with a top border (border-white/5).

Layout:

Desktop: "Powering the best teams" text on the left, separated by a vertical divider. Animated logo slider on the right.

Mobile: Stacked vertically.

Animation: Create an InfiniteSlider component using motion/react that scrolls logos horizontally forever.

Logos: Use these SVG URLs (OpenAI, Nvidia, GitHub, etc.) and apply brightness-0 invert to make them white.

<https://html.tailus.io/blocks/customers/openai.svg>

<https://html.tailus.io/blocks/customers/nvidia.svg>

(Include others similarly)

Please assemble these into a cohesive Hero.tsx, App.tsx, and components/ui/infinite-slider.tsx structure.
