Root container

overlay).

1. Background video (z-0)

Absolute, inset-0, full-cover

HLS stream URL:

attrs: muted loop playsInline autoPlay, classes absolute inset-0 w-full h-full object-cover scale-x-[-1] (horizontally mirrored)

In useEffect: if Hls.isSupported(), create new Hls(), loadSource, attachMedia, on MANIFEST_PARSED set playbackRate = 0.7 and call .play(). Cleanup with hls.destroy(). Safari fallback: set video.src directly and use loadedmetadata listener with same playback rate.

2. Split panels (z-10)

Outer wrapper: absolute inset-0 flex flex-col lg:flex-row z-10 pointer-events-none overflow-y-auto lg:overflow-hidden scrollbar-hide

Left panel — "EMBER" cutout effect

relative w-full lg:w-1/2 min-h-screen lg:h-full flex flex-col pointer-events-auto overflow-hidden border-b lg:border-b-0 lg:border-r border-white/5

Blur layer: absolute inset-0, backgroundColor: rgba(131, 131, 131, 0.3), backdropFilter: blur(20px) (+ webkit prefix), with maskImage: url(#emberMask) so the EMBER letters cut a clear hole through the blur revealing the video.
