

Stellar Launch

Build a Launchex Awards landing page using React + Vite + Tailwind CSS + TypeScript + lucide-react. The page has 3 sections plus persistent overlay navigation elements. Use the fonts "Inter" (body) and "TT Firs Neue" (display headings). The entire page lives inside a white container with 20px padding (p-3 on mobile, p-5 on desktop) creating an inset card effect with large rounded corners (28px mobile, 36px desktop). The scrollable content lives in an absolutely-positioned div inside this container with hidden scrollbars.

FONTS

Load via `<link>` in index.html:

- Google Fonts Inter: weights 300, 400, 500, 600, 700
- TT Firs Neue from:

KEY IMPLEMENTATION DETAILS

- All clip-paths use the `polygon()` function with pixel-based chamfers creating angular/geometric cut corners
- The page is fully responsive with sm/md/lg breakpoints
- Videos use `autoPlay`, `loop`, `muted`, `playsInline` attributes
- Use `lucide-react` for `Sparkles` and `ArrowUpRight` icons only
- The stat card images use `mix-blend-mode: plus-darker` for a deeper tonal effect
- No scrollbar is visible (custom CSS utility)
- All transitions are subtle: `translate`, color changes, brightness
- The outer container clips all content with its rounded corners - the scroll happens inside
